Northwest Blend Dominion Slate

Summit Blend Roman Cobblestone

PAVERS

From old world to contemporary, pavers can lend a distinctive tone to the character of your yard. Patios, walkways, driveways and pool decks all benefit from the beauty, strength and durability of concrete pavers. Mutual Materials pavers come in a variety of shapes, colors and textures so that you can make your dream a reality.

HARDSCAPE ACCESSORIES

Sands, Gravel, Cements and Mortars

Packaged products are designed to meet the needs of homeowners, contractors and masons. Available products include base rock, paver sand, drain rock, joint sand, sand lock and poly-sweep.

Edge Restraints

Edge restraints are a necessary component of all concrete paver installations. Edging is available in both rigid and flexible pieces. Whether you're building a patio, driveway, or commercial installation, Mutual Materials carries an edge restraint designed to meet the specific technical requirements of your project.

SLAB ACCESSORIES

Diamond Head™ Series Pedestals

AWS™ Pedestal System just got better with the Diamond Head™ Series, the two-piece top cap twists from 1/8" to 1-1/4" inch, to virtually eliminate PVC cutting in the field. It is supported by a 6.5" new base cap for balance, and on most membranes this pedestal virtually eliminates the need for a "barrier piece" against the membrane. All shims lock with the new Diamond Head™ Series pieces to fine tune support and eliminate "rockers".

SMART-BLEND PROCESS

When installing products we recommend smart blending per diagrams below to achieve a blended colour pallet.

Pavers will be pulled from **3 different pallets** at a time.

First set of pavers are removed from the **right front** corner of each pallet - leaving the center grouping of pavers.

The next set of pavers are removed from the **left front** corner of each pallet - leaving the center grouping of pavers.

The next set of pavers are removed from the **right back** corner of each pallet - leaving the center grouping of pavers.

The next set of pavers are removed from the **left back** corner of each pallet - leaving the center grouping of pavers.

When the third pallet has half of the center grouping remaining, begin pulling pavers from the next two pallets.

As the remaining pavers of the third pallet are removed, pull additional pavers from the **upper right front** corner of each of the next two pallets - leaving the center grouping of pavers on these pallets.

The next set of pavers are removed from the **right front** corner of each of three pallets - leaving the center grouping of pavers on these pallets.

Continue this paver removal pattern.

EFFLORESCENCE AND HARDSCAPE MATERIALS

What is Efflorescence?

Efflorescence is a whitish powder-like deposit that may appear on surfaces of concrete construction. Efflorescence will not affect structural performance and may reach its peak in as short as 60 days after installation. It may remain for months and some of it may wear away.

The observance of efflorescence changes whether the product is wet or dry. Sometimes efflorescence becomes evident when pavers were installed wet, then allowed to dry. Efflorescence that appears well after the pavers have been installed should be investigated as a pavement issue with emphasis on external sources of water and possible sources of mineral contaminants

Efflorescence variations are subjective with light and moderate efflorescence expected. Light efflorescence can

be remedied with spot-treatment of the paver installation or will dissipate after a short period of time (i.e. less than a calendar year).

For moderate efflorescence follow cleaning instructions of your chosen Efflorescence remover or Paver Cleaner. As a caution, note that the surface cement in concrete pavers can be removed with overly aggressive cleaning applications. Typically, multiple light cleanings are more effective in maintaining the color and texture of a concrete paver than a single heavy cleaning.

Certain paver colors are more sensitive to cleaning chemicals. Always test the cleaning solution and process on a small, inconspicuous area before cleaning the entire installation.

FREQUENTLY ASKED QUESTIONS

How do I order Mutual Materials' products that my home store doesn't stock?

Most stores have a Special Order program for non-stock items. Please check with a store representative for product availability in your area.

Can I install my own project even if I've never done this sort of work before?

Yes you can. Use the installation instructions in this catalog and the design ideas and tips on our website www.mutualmaterials.com to guide your project.

What type of maintenance do Mutual Materials' pavers require?

Our pavers require minimal maintenance. Simply pressure wash or use a leaf blower on your project approximately once per year. You may need to sweep more sand into the joints after pressure washing.

Do I need to seal my pavers?

No, however, sealers do offer 3 key benefits:

- 1) Sealers help resist penetrating stains.
- 2) Sealers enhance the color.
- 3) Certain types of sealers can bind the sand particles in the joints reducing the ability of weeds to generate.

Will weeds grow between my pavers?

Weeds and grass may start to grow between your pavers from seeds and spores blown in by the wind. When this happens you can easily pull them out or use a spot weed killer, or herbicide—it won't damage the pavers.

What is the white haze or powder on the pavers?

This is known as efflorescence. All concrete products contain cement which produces water-soluble calcium oxide. Calcium oxide inside the pavers reacts with water and—when carried to the surface through capillaries—reacts with carbon dioxide to form a haze of calcium carbonate.

It is a natural process and will wear off in time. The amount of efflorescence is difficult to predict but it does eventually go away. Some specially-formulated cleaners may also be used to wash away efflorescence.

What do I do if my pavers become stained?

One of the great benefits to concrete pavers is that the individual stained or damaged pavers can be removed and replaced. Remove the sand around the paver(s) and then use two flat-head screwdrivers to lift them out. It's a good idea to keep a few extra pavers in your shed or garage for just this need.

How tall can I build my retaining wall?

The maximum height you can build your wall depends on the retaining wall block you have chosen. The maximum heights for our walls are:

- Roman Cypress and CypressStone - 4' 0" plus engineered heights
- RomanStack - 2' 0"
- StackStone - 2' 0"

Do I have to bury part of the bottom course of my wall?

Retaining wall blocks need to be securely anchored in the ground. If your wall is three (3) courses or fewer tall, we recommend you bury half of the bottom layer. If your wall is four (4) courses or more tall (up to the maximum recommended height), we recommend burying the entire bottom layer.

If I'm building terraces, how far apart should they be?

The distance between terraces (face of wall to face of wall) should be at least two times the lower wall height. For example, if your lower wall is 2 feet tall, you need to go back 4 feet before building your next wall.

What are the advantages of Mutual Materials retaining wall blocks versus using landscape timbers?

Our retaining wall units are available in a variety of styles and colors to blend with your home's exterior. And unlike products made from untreated wood which rot, warp, and become insect and rodent motels, our products are made to be durable, flexible and timeless.

Will the colour vary between runs of products?

Color may vary from one run to the next. It is best to buy all the product for a project at once. We recommend mixing product from different pallets in order to get a more consistent color in your project. This is also known as blending pallets.

MUTUALMATERIALS®

BUILDING BEAUTY THAT LASTS

We are a family-owned company with over a 120-year history of building communities across Western Canada and the Pacific Northwest.

Our masonry and hardscape products are the foundation for schools, hospitals, stadiums, fire stations, businesses, parks, local family homes and back yards.

We are proud of our Northwest heritage and thrilled that homeowners can build beautiful Outdoor Living areas with our products.
